FIRST VOICE. LAST WORD.

Moon, as seen by the Chandrayaan lander

The Moon is seen as captured by a camera on the lander of Chandrayaan-3.

TAKEN FROM LANDER

The Indian Space Research Organisation (Isro) on Friday released visuals of the Moon captured by cameras on the Chandrayaan-3's lander. The images, captured after the separation of lander module from the propulsion module on Thursday, showed details of the craters on the Moon's surface.

SPACECRAFT MOVES CLOSER TO MOON

Also on Friday, Isro successfully conducted its first de-boosting manoeuvre to reduce the velocity of the spacecraft and reduce the size of its orbit so that it can make a soft landing on the surface of the moon, the space agency said.
